Education

Johns Hopkins University | *Baltimore, MD* **August 2016 – May 2020**
B.A. Cognitive Science, Philosophy - Focal Areas: Computer Science, Neuroscience
M.A Philosophy
Related Coursework: Data Structures (JHU), IBM Data Science Professional Certificate (Coursera)
***Honors*:** Dean's List, MENSA Member, Dean's Undergraduate Research Award (DURA)
***Cumulative GPA*:** 3.84/4.00

Work Experience

TikTok, Software Engineer | *Mountain View, CA* **15 March 2021 – Present**

- Built systems to anticipate and deal with potential threats to the ads ecosystem

MIT Saxe Lab, Data Technician | *Boston, MA* **13 July 2020 – 26 February 2021**

- Innovated hemodynamic Brain-Computer Interface (BCI) pipelines with improved processing and analysis of fNIRS and fMRI data using data science and machine learning tools

Optoro, Summer Developer | *Washington, DC* **2 June 2019 – 23 August 2019**

- Streamlined onboarding for Optoro's largest client, resulting in a ~20% improvement in team efficiency using Ruby on Rails and Vue.js for all projects
- Completed a Warehouse Setup page for clients to set up and configure their warehouses, resulting in a 90x improvement in efficiency from several 15-person developer days to just 4 hours for non-developers
- Expanded the Warehouse Metrics platform to track individual warehouse workers' performance, expediting the process of adding new metrics to the platform by 60x, from 1.5 weeks to less than 1 hour
- Created the UI for Sorting Management resulting in an 80% reduction in tech support, allowing Optoro to take advantage of warehouse machinery that sorts at 50x the speed of a warehouse worker

CogniTensor, Machine Learning Intern | *New Delhi, India* **20 June 2018 – 11 August 2018**

- Worked on CogniText, a project powered by Artificial Intelligence to provide more accurate, topic-specific summaries of online news articles
- Created a reusable program in Python to automatically scrape and process web articles, and used it to get 2000+ full-length articles
- Trained the early stages of the artificial neural network of CogniText, testing out different training models and ways of processing the data to optimize performance

JHU McCloskey Lab, Research Assistant | *Baltimore, MD* **August 2017 – May 2019**

- Analyzed behavioral handwriting data using the lab's proprietary MATLAB software to validate each data point and compare performance across four different axes

Hackathons

Greenhacks, *2nd place, JavaScript*

- Created a web-based application to reduce food waste by alerting students of leftover food from events and implementing an incentive system to encourage buying locally and vegetarian

HopHacks 2018, *Python*

- Built a deep neural network to predict the outcome of NBA games with greater than 70% accuracy, better than a published predictor in *Journal of Quantitative Analysis in Sports*

Skills

Proficient: Python, Java, Ruby on Rails, JavaScript, React.js, Keras, SQL, Docker, RESTful services, HPCCs
Rudimentary: C#, CoffeeScript, MATLAB, Swift, TensorFlow
